

COMP1850 Programming

School of Computer Science, University of Leeds

Worksheet 1.7

This worksheet contains a combination of formative activities and activities that contribute towards your portfolio.

- Portfolio activities are indicated in the title of the task.
- Activities marked by (*) are advanced activities and may take more time to complete.

Expectations:

1. Timeliness: You should complete all the tasks in the order provided and submit your portfolio task to Gradescope before the deadline.
2. Presentation: You should present all your work clearly and concisely following any additional guidance provided by the module staff in the module handbook.
3. Integrity: You are responsible that the evidence you submit as part of your portfolio evidence is **entirely your own work**. You can find out more about Academic integrity on the Skills@library website. All work you submit for assessment is subject to the academic integrity policy.

Feedback: Feedback on formative activities will be provided via Lab classes and tutorials. Feedback on evidence submitted as part of the portfolio will be available on Gradescope.
Support opportunities: Support with the activity sheet is available in the Lab classes and tutorials. Individual support is available via office hours.
Expected complete date: **Friday 20th November**

Portfolio tasks should be entirely your own work. AI tools (such as Microsoft Copilot) can be used in an assistive role. You are permitted to use AI tools for specific defined processes within the assessment.

Within this assessment you **may** use Generative AI to:

- help you start to understand more complex ideas by providing accessible summaries
- test your knowledge against a piece of content
- help identify and correct spelling mistakes and grammatical errors in your work
- provide feedback and advice on your overall coding style

You must **not** use Gen AI to:

- produce written content (code, comments or any other content) which you then submit as your work, regardless of whether you make changes to it.
- rewrite or make changes to any of your work.

Learning Outcomes:

- Develop programs that can handle runtime errors
- Develop programs that use language-provided libraries and frameworks

PORTFOLIO Tasks

There are two portfolio tasks this week. You must complete both tasks to get a Pass.

Task 1 – Week 1.7 Test on Gradescope

Complete the `Week 1.7 Test` on Gradescope. To pass this task, you must achieve a 100% on the test. These questions are closely modelled after the types of questions you will see on the final examination.

Task 2 – Week 1.7 GitHub Repository Check

Complete the `Week 1.7 GitHub Repository Check` on Gradescope, then present your repository to us. You can do this during teaching lab breaks or during the COMP1850/1860 Drop-in sessions in Week 7 and 8. We want to check that your GitHub repository is up to date, with completed work and committed to the repository regularly, consistent coding style, and documented code with appropriate in-line comments and docstrings.

Please note:

- This activity must take place in person – either in class or at a drop-in COMP1860/COMP1850 lab that are in your timetable
- we expect to see an up-to-date repository synced with the current week
- we do not expect to see every task complete for every week with perfect documentation
- we do want to see some examples of your work and your coding
- we will give feedback on Gradescope as well as in person
